A Superior Device Companion

# MeeGo Splashtop OS

A Superior Device Companion

The new Splashtop OS with Splashtop Remote Desktop application installed on MeeGo-based tablets offers a dynamic solution with numerous programs available for a rapidly growing ecosystem. The MeeGo project combines Intel's Moblin™ and Nokia's Maemo\* projects into one Linux\*\*-based, open source software platform for the next generation of computing devices. The MeeGo platform gives developers a wide variety of Intel® Atom™ processor-based devices for their applications, including:

- Tablets
- Netbooks
- Handheld devices
- In-vehicle infotainment (IVI) devices
- Smart TVs

Splashtop has already shipped on millions of notebooks and netbooks worldwide from leading PC OEMs including Acer\*, ASUS\*, Dell\*, HP\*, Lenovo\*, LG\*, Sony\* and others. Splashtop now plans to offer a MeeGo-compliant version of the popular companion OS to all existing OEM customers.

In moving to a MeeGo-based platform, users will now be able to download, install, and run hundreds of apps currently available from the Intel AppUp<sup>SM</sup> Center. By embracing MeeGo as the foundation for Splashtop, application developers can now distribute their software to the next generation of Intel® Atom™ processor-based devices, leading to greater adoption of MeeGo.

## MeeGo Tablets Offer Essential Bridge to the PC

These are the early days of the tablet revolution. Forrester forecasts that tablet sales will more than double in 2011, and that by 2012 we'll see more than 50 million tablet computer users in the US alone.

Intel Atom processor-based tablets running MeeGo provide a familiar, consistent user experience that creates a bridge to the user's primary PC via the Splashtop Remote. With large screens and processing power that supports rich native content and applications, tablets often serve as mobile companions to full laptops and desktops at home or in transit. With a MeeGo tablet powered by Splashtop, consumers can:

- Control a media center PC connected to a TV, using the tablet as a mobile TV screen
- Play PC games with a touch-based interface
- Access files on a home computer while away from home
- Access databases without using a laptop—great for mobile professionals, such as realtors or healthcare workers

# Splashtop Remote for MeeGo

## Access PCs on a Tablet With One Remote

With Splashtop Remote installed on a MeeGo-based tablet, consumers will have access to everything their PCs offer—right in their hands. The MeeGo/Splashtop partnership is the key to connecting the “personal cloud” of data that consumers use on multiple devices: computers, smartphones and now Intel Atom processor-based tablets.

By using the MeeGo touch-optimized OS with a Splashtop Remote, tablet makers can quickly develop differentiated tablet products that take advantage of the open MeeGo application ecosystem as well as all the legacy content, media, and applications available for the PC—an essential differentiator in the crowded tablet market.

## Innovative Features

**Splashtop Remote desktop technology offers consumers a variety of great features:**

- Full Windows\* or Mac\* desktop
- Full video and audio support
- Intuitive, real-time touch interaction with a PC
- Ability to run native applications in addition to any application installed on a user's PC
- Ability to use any browser with Flash\*
- Access to all user bookmarks
- Unlimited application and content choices

## Connectivity

**Splashtop Remote set-up is fast and easy:**

- One-click access to the PC desktop
- Automatic search and connectivity for multiple, local computers with the same app
- Support for all versions of Microsoft\* Windows 7, Vista, and XP, including Home Premium
- Support for Mac OS X 10.6

## Entertainment

**With Splashtop Remote, consumers will be entertained as if they are sitting in front of a PC:**

- Watch videos in any format
- Listen to entire electronic music library
- Play advanced PC games using the patent-pending Splashtop streaming technology
- Interact with computer applications using intuitive touch controls and gestures

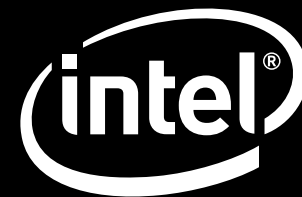

## Outstanding Reviews

*“Both a breakthrough and a bargain.” – New York Times*

*“Splashtop Remote WINS hands-down!” – Apps for iPads*

*“Splashtop Remote is ... extremely easy to set up.” – Pixelatedgeek.com*
